

Fitbit Lower Baggot Street Dublin 2, 2017

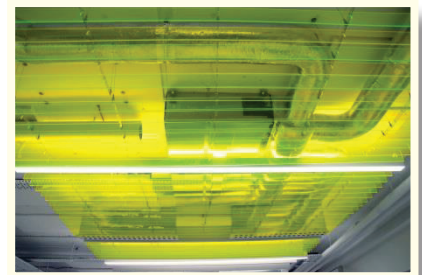

PROJECT

Tech Refrigeration and Air Conditioning partnered with SEHA Consulting Engineers, Structoretone and Precision Mechanical to provide the Air Conditioning Installation at their new state of the art headquarters in Baggot Street, Dublin for the world renowned company **Fitbit**. The manufacturer and the product of choice in this instance was a **Toshiba VRF System**.

This fit-out was carried out on 2 existing floors sandwiched between other existing tenants who were already in situ. One of the main challenges was to get the high specification solution completed without disruption to these other tenants within the building.

We worked closely with the entire construction team to ensure that the delivery of the completed project was on time and to the highest standard. The open plan and exposed ceiling finishes is a particularly eye catching feature of the design and it makes this fit-out stand squarely alongside the best we have done in recent times. The combination of services into the finished fit-out detail is truly very impressive.

SYSTEM

The landlord services serving the floor contained existing **Toshiba VRV** outdoor condensers and mains riser pipework. We consulted with the design team for the client and **Toshiba** to select the most energy efficient and cost effective solution available resulting in an overall installation that has offered the staff the utmost comfort.

CLIENT

Fitbit, a leading wearable technology devices company, was set up by James Park and Eric Friedman in 2007. The US-based firm has since grown its fitness and sleep tracking devices to a global brand, with the most recent figures showing the company has shipped in excess of 50 million devices globally. Fitbit pioneered the connected health and fitness market. Its products help people lead healthier, more active lives by making behavioural changes such as exercising more, eating better, tracking their sleep and managing their weight.
