PROJECT

Tech Refrigeration and Air Conditioning partnered with O'Connor Sutton Cronin Consulting and the DJI Group to upgrade the air conditioning systems at the newly refurbished Truata HQ on the 1st floor of Silverstone House on Ballymoss Road in Sandyford, Dublin 18. The project involved upgrading the existing VRF system with new indoor units as well as modifications to the existing HVAC systems, which included relocation of the existing indoor units and grilles to best suit the newly designed office layout.

PRODUCT

The open plan office areas are served by a stand-alone **Mitsubishi VRF system** providing heating and cooling to all areas while the canteen area is serviced by separate Mitsubishi one to one split systems. All Mitsubishi units in the office space were ducted type systems. Condensers all are located within the plant area on the roof alongside the existing air handling systems which are providing fresh air supply. As part of the works, **Tech Refrigeration and Air Conditioning** had also carried out upgrades to the existing primary and secondary ventilation systems, including installation of exposed grilles providing air conditioning and fresh air to the open plan, canteen and office spaces to ensure maximum comfort for the incoming tenants.

We worked closely with the entire construction team to ensure that the project was delivered to the highest standard. The ceilings in the open plan offices, board room and canteen spaces are in keeping with most modern office environments with exposed services painted black making for a very aesthetically pleasing finish.

CLIENT

Truata is an expert provider of technologies and solutions which both maximize the clients' data analytics utility and minimize their risk associated with privacy regulations by the application of independent data anonymization. Truata is at the vanguard of an entirely new application of independent data management and provide specialist expertise from both technological and legal compliance points of view. Through the application of independent data anonymization, ethical analytics can unlock the full power of a company's data while protecting their customers' privacy.
