

Verizon Connect

Sandyford, Dublin
2019

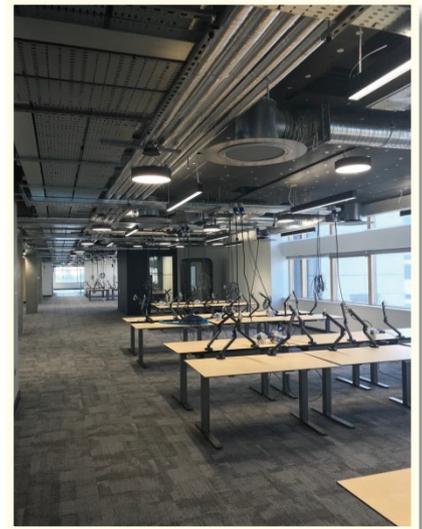

PROJECT

As part of Tech Refrigeration and Air Conditioning's continued relationship with the world's largest telematics provider, **Verizon Connect**, we had the pleasure in carrying out the **Panasonic** VRF Installation in their new state of the art office in Sandyford, Dublin 18.

The VRF is controlled via an intelligent touch screen controller which is connected to the clients BMS system. The touch screen controller enables the user to set temperature and temperature range limits, fully control all the indoor units and limit functions on the local wall mounted controllers. Its enlarged screen (10.4 inch) operates like a smartphone which makes controlling any unit on the system very straightforward. The indoor ducted units in the open plan area are designed with comfort in mind as the unique Panasonic Off Coil Control function is enabled on all units to limit the air off to 12°C.

We partnered once again with **Designer Group** to deliver a complete client solution for this project. Our engineers commissioned and setup up the comms room units to operate on an automatic weekly rotation system which extends the life of the systems and also offers the client the peace of mind that their systems are backed up in case of a failure on one system in the critical room.

PRODUCT

Founded in Japan in 1918, **Panasonic's** first air conditioner was a table top electric fan in 1936. By 1958, the first Panasonic room air conditioner was marketed under the National Brand. In 2009, with the merger of **Sanyo**, Panasonic became one of the largest electronic producers in the world. Today Panasonic are a world leader in the development and technological advances of air conditioners. Their latest "Smart Air Conditioners" have been received with worldwide acclaim and use a combination of innovative energy saving technology and an enhanced air purifying system, **nanoe-x**.

CLIENT

Verizon Connect are a global superpower in terms of connected data market. They operate in 15 countries and employ 3,500 dedicated people. Their stated aim is to guide a connected world on the go by automating, optimising and revolutionising the way people, vehicles and things move through the world. The modern office in Sandyford was the third fit-out Tech Refrigeration and Air Conditioning completed for the company following on from the two offices completed recently in Eastpoint Business Park.
