

Pinterest 60 Dawson Street

PROJECT

Pinterest, a leading social media platform, recently completed a state-of-the-art office fitout at 60 Dawson Street, Dublin 2. This project was designed to create a modern, comfortable, and energy-efficient workspace for its employees. A key component of the fitout was the installation of Mitsubishi Electric Mr. Slim R32 Air Conditioning Systems in the Communications Rooms.

These Communications rooms are managed by PAR-41 Controllers and are equipped with a customised Automatic Change-Over Panel. This system ensures that the units operate on a rotational basis, and in the event of an alarm, automatically switches units to prevent overheating of the communications equipment. This provides Pinterest with reliable and continuous environmental control, safeguarding critical technology assets.

PRODUCT

The Mitsubishi Electric Mr. Slim R32 Hi-Wall Units and condensers are among the most energy-efficient solutions available. They feature advanced inverter technology and boast high SEER (Seasonal Energy Efficiency Ratio) ratings, ensuring optimal performance. The system offers advanced compatibility with various control systems, including Building Management System (BMS) integration and remote access via smartphone applications.

The use of R32 refrigerant, an eco-friendly option with low Global Warming Potential (GWP), ensures full compliance with stringent environmental standards. The outdoor units are renowned for their robust and quiet operation and were strategically installed to minimize noise disturbance while maintaining efficient heat exchange.

The integration with the Building Management System (BMS) enables centralized monitoring and control, allowing for seamless management of the office's climate control systems.

CLIENT

Pinterest, established in March 2010 by Ben Silbermann, Paul Sciarra, and Evan Sharp, is a prominent social media platform that enables users to discover and save ideas through images, commonly referred to as "pins." These pins can be organized into collections known as "boards." Over the years, Pinterest has transformed from a simple digital scrapbooking tool into a powerful visual search engine and a significant force in the digital marketing arena.
